

STOR 320 Tidy Data

Lecture 9

Yao Li

Department of Statistics and Operations Research UNC Chapel Hill

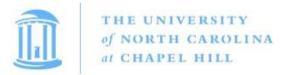

Introduction

- Read Chapter 12
- Functions From tidyr Package

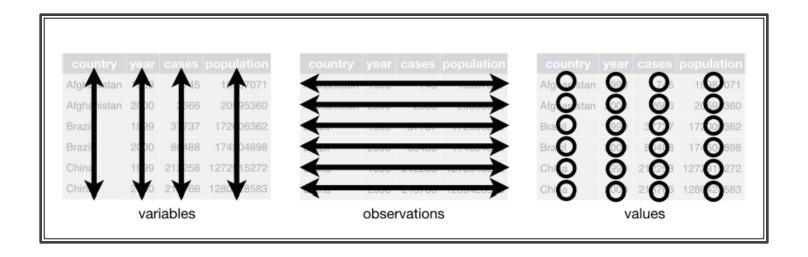

>library(tidyr)

- pivot_longer()
- pivot wider()
- separate()
- unite()
- complete()

Tidy Data Definition

- For Tidy Data:
 - Each Variable Must Have Its Own Column
 - Each Observation Must Have Its Own Row
 - Each Value Must Have Its Own Cell

Problem

- Most Data is Not Tidy
- Reason: Data Collectors Often Don't Know How Data Should Be Recorded Since They Don't Analyze the Data
- Common Problems
 - A Variable Spread Across Multiple Columns
 - A Observation is Spread Across Multiple Rows

"Tidy datasets are all alike, but every messy dataset is messy in its own way." — Hadley Wickham

Untidy Data Example 1

 Multiple Columns for One Variable

Problem

- Multiple Treatment Data
- Variables "Control", "Cond1", and "Cond2" are Measuring the Same Thing Under Different Treatments
- The Name of the Variable Whose Values Form the Column Names Can Be Called "Treatment"
- The Name of the Variable Whose Values are Spread Over the Cells Can Be Called "Outcome"

```
tidy1a=untidy1 %>%
  pivot_longer(control:cond2, names_to = "Treatment",
values_to = "Outcome")
tidy1a
```

subject <dbl></dbl>	sex <chr></chr>	Treatment <chr></chr>	Outcome <dbl></dbl>
1	М	control	7.9
1	М	cond1	12.3
1	М	cond2	10.7
2	F	control	6.3
2	F	cond1	10.6
2	F	cond2	11.1
3	F	control	9.5
3	F	cond1	13.1
3	F	cond2	13.8
4	М	control	11.5
4	М	cond1	13.4
4	M	cond2	12.9

Longer by index

```
tidy1b=untidy1 %>%
  pivot_longer(3:5, names_to="Treatment",values_to="Outcome")
tidy1b

'``{r}
tidy1a=untidy1 %>%
  gather(3:5,key="Treatment",value="Outcome")
tidy1a
```

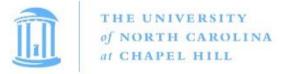

subject <dbl></dbl>	sex <chr></chr>	Treatment <chr></chr>	Outcome <dbl></dbl>
1	М	control	7.9
1	М	cond1	12.3
1	М	cond2	10.7
2	F	control	6.3
2	F	cond1	10.6
2	F	cond2	11.1
3	F	control	9.5
3	F	cond1	13.1
3	F	cond2	13.8
4	М	control	11.5
4	М	cond1	13.4
4	М	cond2	12.9

Process

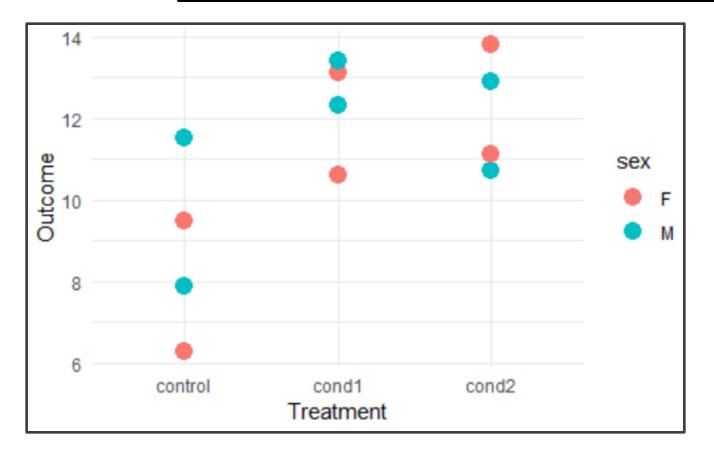

```
tidy1b=untidy1 %>%
  pivot_longer(3:5, names_to="Treatment",values_to="Outcome")
tidy1b
```

Ш							
	##	#	A tibble: 4 x	x 5			
	##		subject sex	control	cond1	cond2	
	##		<dbl> <chr></chr></dbl>	<dbl></dbl>	<dbl></dbl>	<dbl></dbl>	
	##	1	1 M	7.9	12.3	10.7	
	##	2	2 F	6.3	10.6	11.1	
	##	3	3 F	8. 5	13.1	13.8	
	##	4	4 M	11.5	13.4	12.9	
Ш							

subject <dbl></dbl>	sex <chr></chr>	Treatment <chr></chr>	Outcome <dbl></dbl>	
1	М	control	7.9	
1	М	cond1	12.3	
1	М	cond2	10.7	4
2	F	control	6.3	
2	F	cond1	10.6	
2	F	cond2	11.1	
3	F	control	9.5	
3	F	cond1	13.1	
3	F	cond2	13.8	
4	М	control	11.5	
4	М	cond1	13.4	
4	М	cond2	12.9	

```
ggplot(tidy1b)+
  geom_point(aes(x=Treatment,y=Outcome,color=sex),size=4) +
  theme_minimal()
```

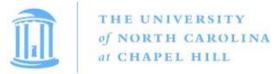

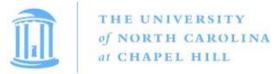

Untidy Data Example 2

Problem

- Repeated Measures Data
- Variables "0.3", "0.6", and "0.8" are Measuring the Same Thing Under Different Drug Strengths
- The Name of the Variable Whose Values Form the Column Names Can Be Called "Dosage"
- The Name of the Variable Whose Values are Spread Over the Cells Can Be Called "Outcome"

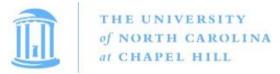

```
```{r}
tidy2a=untidy2 %>%
 pivot_longer(`0.3`: `0.8`,names_to="Dosage",values_to="Outcome")
glimpse(tidy2a)
Rows: 12
Columns: 4
$ subject <dbl> 1, 1, 1, 2, 2, 2, 3, 3, 3, 4, 4, 4
 $ sex
$ Dosage <chr> "0.3", "0.6", "0.8", "0.3", "0.6", "0.8", "0.8", "0.6", ...
$ Outcome <dbl> 7.9, 12.3, 10.7, 6.3, 10.6, 11.1, 9.5, 13.1, 13.8, 11.5...
```

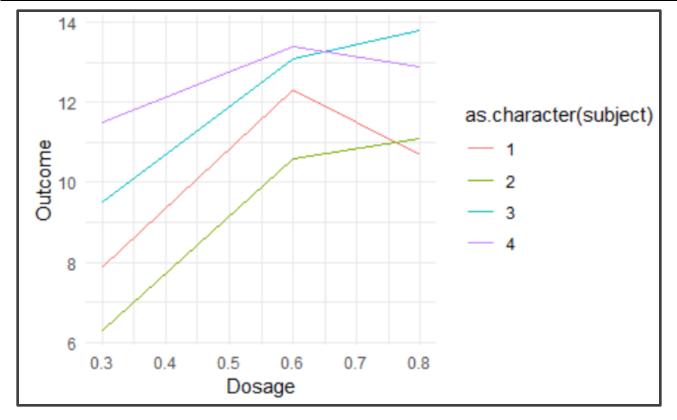

```
```{r}
tidy2b=untidy2 %>%
 pivot_longer(3:5,names_to="Dosage_ch",values_to="Outcome") %>%
 mutate(Dosage=as.numeric(Dosage_ch)) %>%
 select(-Dosage_ch)
glimpse(tidy2b)
                                                             Rows: 12
Columns: 4
$ subject <dbl> 1, 1, 1, 2, 2, 2, 3, 3, 3, 4, 4, 4
         $ sex
$ Outcome <dbl> 7.9, 12.3, 10.7, 6.3, 10.6, 11.1, 9.5, 13.1, 13.8, 11.5...
$ Dosage \( \langle dbl > 0.3, 0.6, 0.8, 0.3, 0.6, 0.8, 0.3, 0.6, 0.8, 0.3, 0.6, \text{...}
```

```
tidy2b=untidy2 %>%
  gather(`0.3`:`0.8`, key="Dosage", value="Outcome", convert=T)
glimpse(tidy2b)
```

Untidy Data Example 3

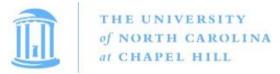

Multiple rows

```
untidy3=tribble(
   ~Pack, ~Type, ~Measure, ~Value,
   1, "Regular", "Count", 15,
   1, "Regular", "Percent Blue", 0.2,
   2, "Peanut", "Count", 12,
   2, "Peanut", "Percent Blue", 0.3,
   )
   untidy3
```

Problem

Less Common

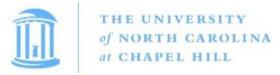

- Column "Measures" Contains Variable Names
- Column "Value" Contains the Output of the Different Variables
- Notice Values are of Different Units (Count vs Percentage)
- Wider Does the Opposite of Longer

Wider

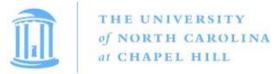

```
```{r}
tidy3=untidy3 %>%
 pivot_wider(names_from=Measure,values_from=Value)
tidy3
```
```

```
tidy3=untidy3 %>%
spread(key=Measure,value=Value)
tidy3
```

Process

```
## # A tibble: 4 x 4
                       ##
                            Pack Type Measure
                                                    Value
                          <dbl> <chr> <chr>
                                                    <dbl>
                               1 Regular Count
                       ## 1
                       ## 2 1 Regular Percent Bly
                       ## 3 2 Peanut Count
                       ## 4
                            2 Peanut Percent Blue
## # A tibble: 2 x 4
     Pack Type Count `Percent
                                   Blue
                                  <dbl>
   <dbl> <dbl> <dbl>
                      15
                                    0.2
        1 Regular
                      12
         2 Peanut
                                    0.3
## 2
```

Wider

```
tidy3 %>%
 mutate(nBlue=Count*`Percent Blue`) %>%
 select(-Count, - `Percent Blue`)
## # A tibble: 2 x 3
## Pack Type nBlue
## <dbl> <chr> <dbl>
## 1 1 Regular 3
## 2 2 Peanut 3.6
```

Untidy Data Example 4

```
untidy4=tribble(
   ~Pack,   ~Type,   ~PropBlue,   ~Date,

1,   "Regular",   "3/15",        "9-28-2018",

2,   "Regular",   "2/15",   "9-30-2018",

3,   "Peanut",   "4/12",   "9-28-2018",

4,   "Peanut",   "5/13",   "9-30-2018",
)
untidy4
```

Problem

- Very Uncommon
- ## # A tibble: 4 x 4

 ## Pack Type PropBlue Date

 ## <dbl> <chr> <chr> ## 1 1 Regular 3/15 9-28-2018

 ## 2 2 Regular 2/15 9-30-2018

 ## 3 3 Peanut 4/12 9-28-2018

 ## 4 4 Peanut 5/13 9-30-2018
- The Variable "PropBlue" Contains Two Numeric Variables
- The Variable "Date" Contains Three Numeric Variables
- We Must Separate Both of These Variables Into Multiple Columns

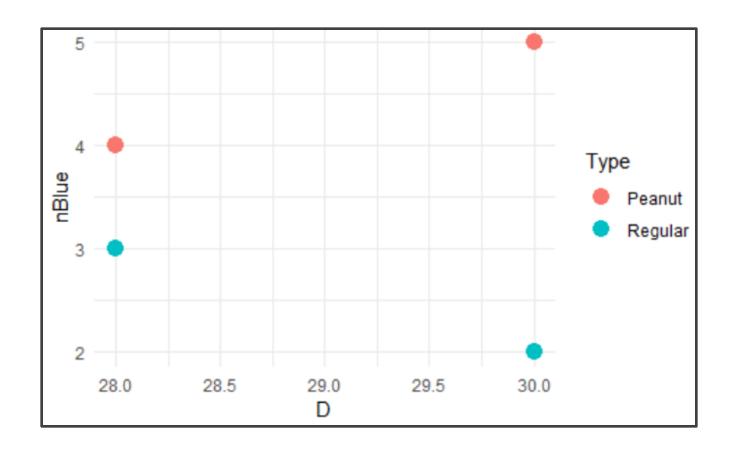

Separating

```
``{r}
                                                                 NA
tidy4a=untidy4 %>%
 separate(PropBlue, into=c("nBlue", "Total"), sep="/") %>%
 separate(Date, into=c("M","D","Y"),sep="-")
glimpse(tidy4a)
                                                         Rows: 4
Columns: 7
$ Pack <dbl> 1, 2, 3, 4
$ Type <chr> "Regular", "Regular", "Peanut", "Peanut"
$ nBlue <chr> "3", "2", "4", "5"
$ Total <chr> "15", "15", "12", "13"
$ M
        <chr> "9", "9", "9", "9"
        <chr> "28", "30", "28", "30"
$ D
$ Y
        <chr> "2018", "2018", "2018", "2018"
```

```
``{r}
                                                   tidy4b=untidy4 %>%
  separate(PropBlue, into=c("nBlue", "Total"), convert=T) %>%
  separate(Date, into=c("M","D","Y"),convert=T)
alimpse(tidy4b)
                                                   Rows: 4
 Columns: 7
 $ Pack <dbl> 1, 2, 3, 4
 $ Type <chr> "Regular", "Regular", "Peanut", "Peanut"
$ nBlue < int> 3, 2, 4, 5
 $ Total <int> 15, 15, 12, 13
 $ M
     <int> 9, 9, 9, 9
     <int> 28, 30, 28, 30
 $ D
 $ Y
       <int> 2018, 2018, 2018, 2018
```

Separating

Untidy Data Example 5

untidy5

```
## # A tibble: 4 x 4
## Pack Type Day Month
## <dbl> <chr> <dbl> <dbl> <dbl>
## 1 1 Regular 1 8
## 2 2 Regular 2 8
## 3 3 Regular 3 9
## 4 4 Regular 4 9
```

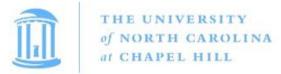

Uniting

- Absolutely Silly
- Uniting Does the Opposite of Separating

```
tidy5=untidy5 %>%
  unite(swag, Day, Month, sep=":(")
tidy5
```

```
## # A tibble: 4 x 3
## Pack Type swag
## <dbl> <chr> <chr>
## 1    1 Regular 1:(8
## 2    2 Regular 2:(8
## 3    3 Regular 3:(9
## 4    4 Regular 4:(9
```

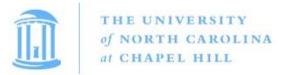

- Two Ways
 - Explicitly: Defined to Be Missing Using NA
 - Implicitly: Absent From Data
- There is not a Uniform Way to Handle Either of These Problems
- Rule: Either Convert All Explicitly Missing to Implicitly Missing or Convert All Implicitly Missing to Explicitly Missing

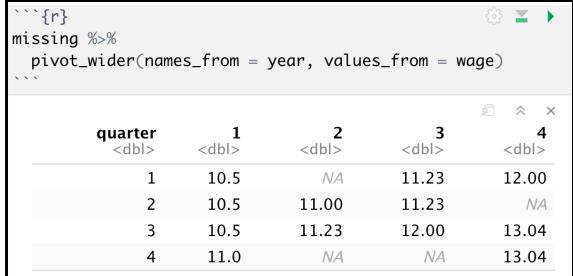

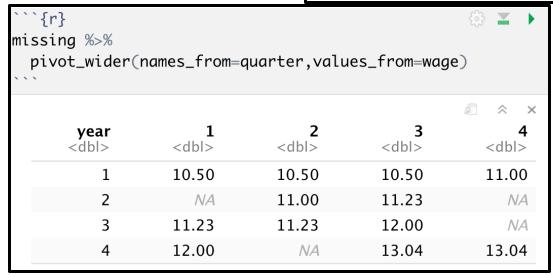

Example

| ## | # A | tibbl | Le: | 14 | Х | 3 | |
|----|-----|-------------|-----|--|----|-------------|--|
| ## | | year | qua | arte | er | wage | |
| ## | 4 | <dbl></dbl> | < | <db]< th=""><th>L></th><th><dbl></dbl></th><th></th></db]<> | L> | <dbl></dbl> | |
| ## | 1 | 1 | | | 1 | 10.5 | |
| ## | 2 | 1 | | | 2 | 10.5 | |
| ## | 3 | 1 | | | 3 | 10.5 | |
| ## | 4 | 1 | | | 4 | 11 | |
| ## | 5 | 2 | | | 2 | 11 | |
| ## | 6 | 2 | | | 3 | 11.2 | |
| ## | 7 | 3 | | | 1 | 11.2 | |
| ## | 8 | 3 | | | 2 | 11.2 | |
| ## | 9 | 3 | | | 3 | 12 | |
| ## | 10 | 3 | | | 4 | NA | |
| ## | 11 | 4 | | | 1 | 12 | |
| ## | 12 | 4 | | | 2 | NA | |
| ## | 13 | 4 | | | 3 | 13.0 | |
| ## | 14 | 4 | | | 4 | 13.0 | |

Notice:

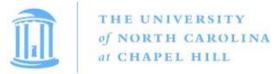

```
missing %>%
  pivot_wider(names_from=quarter,values_from=wage) %>%
  pivot_longer(2:5,names_to='quarter',values_to='wage')
...
```

Implicit to Explicit

| year
<dbl></dbl> | quarter
<chr></chr> | wage
<dbl></dbl> |
|---------------------|------------------------|---------------------|
| 1 | 1 | 10.50 |
| 1 | 2 | 10.50 |
| 1 | 3 | 10.50 |
| 1 | 4 | 11.00 |
| 2 | 1 | NA |
| 2 | 2 | 11.00 |
| 2 | 3 | 11.23 |
| 2 | 4 | NA |
| 3 | 1 | 11.23 |
| 3 | 2 | 11.23 |
| 3 | 3 | 12.00 |
| 3 | 4 | NA |
| 4 | 1 | 12.00 |
| 4 | 2 | NA |
| 4 | 3 | 13.04 |
| 4 | 4 | 13.04 |

Explicit to Implicit

```
missing %>%
  pivot_wider(names_from=quarter,values_from=wage) %>%
  pivot_longer(2:5,names_to='quarter',values_to='wage',values_drop_na = T)
```

| | quarter <chr></chr> | wage
<dbl></dbl> |
|---|----------------------------|---------------------|
| 1 | 1 | 10.50 |
| 3 | 1 | 11.23 |
| 4 | 1 | 12.00 |
| 1 | 2 | 10.50 |
| 2 | 2 | 11.00 |
| 3 | 2 | 11.23 |
| 1 | 3 | 10.50 |
| 2 | 3 | 11.23 |
| 3 | 3 | 12.00 |
| 4 | 3 | 13.04 |
| 1 | 4 | 11.00 |
| 4 | 4 | 13.04 |

Complete Function

```
missing %>%
  complete (year, quarter)
## # A tibble: 16 x 3
       year quarter wage
      <dbl>
              <dbl> <dbl>
                    10.5
                  2 10.5
                  3 10.5
                    11
                  1 NA
                  2 11
                  3 11.2
                  4 NA
                  1 11.2
                  2 11.2
                    12
                     NA
                     12
                   NA
                    13.0
                     13.0
## 16
          4
```
